

Trailing Shoe

Slurry Injection Unit

The MAJOR trailing shoe sits close to the rear of the tanker for better weight distribution and is designed to fit any size tanker.

Slurry enters the Vogelsang macerator through the 4" bauer coupling and is distributed through the 40mm outlets. A large capacity stone trap is located under the macerator which collects debris. It can be cleaned out easily, without the use of tools.

The high tensile springs use the high carbon steel coulters to split the grass - allowing the slurry to run on the ground. The spring steel bars on the frame allow the outlets to follow the ground contours.

The ExaCut Macerator is fitted with an integrated foreign body separator to prevent debris from blocking the outlets. It also contains self sharpening and self adjusting blades meaning reduced maintenance times.

Product specifications		
Model	MJ80-640	MJ80-700
Working Width	6.4m (20' 11")	7.0m (22' 11")
Transport Width	2.7m	2.7m
No. of Outlets	24	28
Outlet Width	40mm	40mm

- ✓ Fully galvanised body
- ✓ Vogelsang ExaCut macerator
- ✓ Road lighting kit
- ✓ Can change from trailing shoe to splash plate easily, without removing the trailing shoe unit
