

1100 Gallon Water Bowser

Client: Amey (formally Enterprise PLC), Oxford , UK

Amey (formally Enterprise PLC) is a company which is responsible for the maintenance of shrubs, parade grounds and flower borders throughout all the Royal Parks in London.

Water shortages and the increasing cost of water usage is something that is a challenge for the team at Amey.

Amey placed an order for three MAJOR 1150 Gallon Water Bowsers. These customised bowsers were each fitted with standard splash plates for watering larger open spaces.

The bowsers were supplied with heavy duty hoses to take "grey water" from the hydrants, lakes and rain water storage areas in the parks.

This water is then reused to water the vegetation within the parks. This has resulted in a significant reduction in annual water charges.

Design Details

- ✓ 1150 gallon water tankers
- ✓ Hose reel for watering of flowerbeds
- ✓ 9000 litre pump with overdrive
- ✓ 15 X 22.5 wheels for minimal ground compaction
